## Get BSDA Certified!

### What is it?

The BSDA certification is designed to be an entry-level certification on BSD Unix systems administration. The successful BSDA candidate is able to complete common administrative and troubleshooting tasks in seven knowledge domains using FreeBSD, NetBSD, OpenBSD and Dragonfly BSD operating systems.

### What makes this exam different?

The exam itself is created by experienced BSD system administrators with input from the BSD community and employers who use BSD systems. Exam questions undergo an exhaustive psychometric process to help ensure they fairly assess real world skills.

The test delivery method is unique to the testing industry: it is entirely comprised of Open Source software and is released under a BSD license. This allows the exam to be globally affordable and available anywhere there is a proctored environment (including universities and conferences). This solution also allows for exam translation and the easy modification of exam questions to keep the exam current and relevant.

### When will the exam be available?

Beta tests should be available before Q2/07.
